## **Explanations regarding the application for access to the web application Nachhaltige Biomasse System (Nabisy) to enter data on the sustainability of biofuels and bioliquids**

### **General remarks**

By means of the web application Nabisy, data on the sustainability of biofuels and bioliquids can be entered, free of charge, if access rights have been granted.

In order to use the web application you need a user name and a password which you can apply for with this form. Please lodge the application with your national system or with the system that was recognized by the Commission of the European Communities. The system shall forward your application to the BLE.

You may enter the required data via Nabisy and generate a print-out of that information for your customers if they also work with Nabisy.

Alternatively, the BLE also accepts your information in csv file format. Please contact your system for the respective style sheet.

### **Access rights**

You are entitled to obtain a password for the web application Nabisy,

- if the operation / operational site is part of a system recognized by the Commission of the European Communities or of a system nationally recognized by an EU member state,
- if the operation / operational site complies with the requirements of its system,
- if the operation / operational site is subject to regular controls within its system, e.g. in the framework of certifications and their annual monitoring and
- if the applicant generally converts the biomass into bioliquids or prepares biofuels up to the quality level required for final use.

### **Applicant's core data**

(1) It must be indicated whether the applicant is an operation or an operational site. *Operations* are legally independent economic units which produce, process, trade or supply biomass. *Operational sites* are legally dependent economic units (dependent branches) and part of an operation.

The application must be lodged separately for each operational site.

- (2) The name, the legal form and address of the operation or operational site are to be indicated as well as the email address and telephone number.
- (3) Also, the name of the person in charge of biomass in the operation and/or the operational site is to be indicated clearly.

**System data**

If the requesting entity uses the requirements of a nationally recognized system or of a system recognized by the Commission of the European Communities,

- (1) the address of the system in question is to be indicated,
- (2) the system identification number is to be indicated, if known,
- (3) the applicant's identification number shall be assigned by the system and
- (4) data on the certificate / the certificate of conformity are required.

**Registration data**

Each application for access needs to contain the surname, first name, office telephone number, email address and function of the person in charge in the operation and/or the operational site.

Should more than 5 staff members require access to Nabisy, several copies of the additional page containing registration data shall be handed in.
