

# REDcert<sup>2</sup> - Certification solution for the chemical industry

practically oriented | reliable | efficient

## REDcert<sup>2</sup>

is a certification scheme for sustainable material flows in the chemical industry. Sustainability is not a new topic in the chemical industry but more present than ever. The REDcert<sup>2</sup> scheme enables companies from this sector to furnish evidence that they have reduced the use of and replaced fossil-based raw materials – either by means of sustainably certified biomass or through recycling of waste materials – and have this confirmed by a third-party audit. By participating in the REDcert<sup>2</sup> scheme chemical companies can make an important contribution to conserving resources as well as reducing greenhouse gases and thereby promote the development of sustainability.

## REDcert<sup>2</sup> services

- REDcert<sup>2</sup> is based on many years of experience in sustainability certification
- REDcert<sup>2</sup> offers ...
  - ... a practically oriented and efficient certification solution for sustainable material flows in the chemical industry.
  - ... flexibility e.g. in the mass balance period, recycling options and the recognition of other certificates (e.g. ISCC PLUS).
  - ... a clear cost structure for the companies.
